Subject: Copper Site Specific PRELIMINARY Calculations
Attachments: PPT for Copper SSC - PRELIMINARY Results for Discussion Purposes.pptx; Region 5 DRAFT Copper Calcs 022015.xlsx

Chris, here are the PPT slides we went through last week and also the excel spreadsheet with our calculations. I added a second page to the spreadsheet showing only the results, along with summary statistics for the data on total recoverable copper that you provided us. Please note that these calculations are considered preliminary draft calculations and they are intended for discussion purposes at this stage. These calculations are subject to changes as we continue to work through the analysis.

One limitation to a comparison of the effluent data with the calculations is that the calculations we have done so far are for dissolved copper and the effluent data are for total recoverable copper. We can do a similar calculation for total recoverable copper; would there be any data on dissolved copper for these discharges?

Pete
